

# THE CHARITY HOSPITAL

OF LOUISIANA  
WAS FOUNDED IN THE YEAR 1786

BY

DON ANDRES ALMONASTER Y ROJAS,

To whose generous endowment, the munificence of the  
LEGISLATURE OF THIS STATE  
and the liberality of the State of Pennsylvania, the community is indebted  
for the means of erecting this edifice, built in the year

1832

His Excellency A. B. Roman being Governor and Ex-Officio  
President of the Institution.

To record which and inscribe hereon the names and contributions of its  
distinguished benefactors

The Board of Administrators,  
Charity Hospital,  
New Orleans, La.

Gentlemen:

It is with great pleasure that I attempt to express our appreciation of the new Internes' Home, which was made possible by you and our Superintendent, and recently turned over to the Corps.

Pages missing here were advertisements and have been removed so that the volume will not be too bulky.

February 13, 1928.

The Board of Administrators,  
Charity Hospital,  
New Orleans, La.

Gentlemen:

It is with great pleasure that I attempt to express our appreciation of the new Internes' Home, which was made possible by you and our Superintendent, and recently turned over to the Corps.

It is entirely within keeping with the remarkable progress that the Hospital has made since the present Board has governed it. We realize that in order to give us this wonderful home, you have deprived other Departments of the Hospital of many necessary and essential things. Realizing this, I sincerely hope that we will justify your actions on such an expenditure by bettering the Internes' staff and service to the patients of the Hospital.

Again thanking you for this gift, and for the interest you have shown the members of the Internes' Corps in the past, I am,

Respectfully yours,

T. H. WALLIS, M. D.,  
President, Interne Corps.

## ANNUAL REPORT OF THE VICE-PRESIDENT.

FRED. W. EVANS.

February 25, 1928.

Governor O. H. Simpson, Ex-Officio President,  
Board of Administrators, Charity Hospital,  
New Orleans, Louisiana.

My dear Governor:

It is indeed gratifying to report to you that during the year just ended Charity Hospital cared for more patients than ever before in its history. It is felt that greater progress was made during last year than at any other corresponding time.

I am sure I express the unanimous opinion of the Board, as well as everyone who has knowledge of our affairs, that Charity Hospital today enjoys an enviable position, and at no time during its long and useful career, has it rendered a better service to its patients.

The per capita per diem has increased but four cents over last year, which emphasizes the economical manner in which the affairs have been administered. This continues about one-half as much as other institutions of its kind.

The fact that the hospital has cared for so many patients and in such a satisfactory way, is ample justification in the belief that everything has been handled in an efficient manner.

In the way of permanent improvements, the two outstanding achievements were the building of the Sisters' Home and a Home for Internes.

The Sisters' Home was the gift of Mrs. John Dibert and the Internes' Home was built with money appropriated by the State Legislature in 1926. These homes bring an end to a need that we have had for many years.

There is yet much to be done, and it will be necessary for the Board to use every possible means to try to see that the budget for the next two years will be given in full. Necessary improvements are anticipated and the maintenance cost to keep the hospital up to its usual standard of efficiency will be more.

It is pleasing to report that the Advisory Committee, which is elected annually by the Visiting Staff, has been very cooperative and the assistance rendered the Board by these gentlemen is greatly appreciated.

The Visiting Staff has again responded to its duty and it is felt that the patients have received excellent care.

New Orleans is a great medical center and the Visiting Staff of this hospital comprises some of the most renowned men in the profession. It must be remembered that the services of the staff are gratuitous and if represented by dollars and cents would amount to an enormous sum.

The Sisters of Charity have, as ever, been devoted to the patients and the hospital owes them a debt of gratitude that can never be paid.

Dr. Wm. W. Leake, Superintendent, cannot be praised too highly for the keen judgment shown in handling the affairs of the hospital, and due credit must be given Mr. Fred. W. Matthews, Secretary-Treasurer, for the efficient and accurate manner in which his office has been conducted.

Concluding, I wish to report that your Board met regularly and the various committees gave liberally of their time to discuss more in detail the affairs of the hospital. To each member of the Board I am greatly indebted for the generous cooperation given at all times. The friendly feeling that has existed and the spirit of cooperation has been the means of making a successful administration.

Yours respectfully,

F. W. EVANS,

Vice-President

## SUPERINTENDENT'S REPORT

February 25, 1928.

Honorable Board of Administrators,  
Charity Hospital, New Orleans, La.  
Gentlemen:

As the curtain is rung down upon the activities of Charity Hospital for the year 1927, your Superintendent is left with a pleasant memory of having had two ambitions realized—the building of the Sisters' magnificent new home, and the completion of the beautiful new home for the Internes.

The former was made possible through the generosity of Mrs. John Dibert. It will be remembered, Mrs. Dibert just the year before, gave nearly a half million dollars for the building of the Dibert Tuberculosis Hospital. Then scarcely before this building was completed she gave \$175,000.00 for the erection of a home for the Sisters of Charity. As much as this home was needed, it is felt that the State could not have provided it at this time, as other pressing needs of the hospital would have taken precedence.

This home is a fire-proof building, with all modern conveniences, and is one we are all justly proud of. The Sisters by their constant sacrifice in their devotion of duty to the hospital are certainly entitled to rest, quietude and comfort when they retire to their home. The entire hospital rejoices that they now have such a place.

Mrs. Dibert by this munificent gift has endeared herself to the hearts of all of us. The philanthropy of this gentle woman to the sick and injured of our State will always be remembered, and her acts of kindness will place her on a pedestal as one of the State's greatest benefactors.

The completion of the Internes' Home is the realization of an ambition that we have all had, and is a monument to the Board of Administrators. The old quarters were inadequate, both as to necessities and room space, and many internes were forced to live in other parts of the city. The disadvantage of such an arrangement is evident.

Their new home is all that could be desired, a thoroughly modern, fire-proof structure. The ground floor has reception rooms, library, smoking room and large billiard room for recreation when not on duty. The furnishings are appropriate and in keeping with the building. The bed rooms are neatly furnished with all-steel furniture and accommodate two to a room. The number of internes at present is fifty-one, but this home has space for the accommodation of seventy-eight, and will care for the needs of the hospital for many years to come.

The entire building has a homelike atmosphere and will stimulate contentment among the corps, that will redound in large measure to the benefit of the patients. Formerly the internes, during their leisure hours, having no attractions at home were forced to go out in self defense. With the present arrangement, it is felt the attraction at home will be so great that a considerable part of their leisure time will be spent in rest, recreation and study, which will prove an asset to the hospital.

Having served an internship here for two years, no one is better qualified to know the great appreciation felt by the entire interne corps. Only the persistent and untiring efforts of the Board of Administrators made this home possible, and the entire profession expresses its gratitude to you for this great achievement in your administration.

It will always be a wonderful satisfaction to me to sit in retrospect and feel that these two great achievements were accomplished during my incumbency as Superintendent.

There were many other notable improvements made during the year, but for the details of these, you are respectfully referred to the report of the Chief Engineer.

It may be well to mention, however, that the grass plot of the sidewalk extending the entire distance from LaSalle Street to Claiborne Avenue has been converted into suitable parking space for physicians of the staff and those visiting patients in the hospital. All of the palms were cut down and the telegraph poles and electric wire poles moved back. The surface is concrete and offers an ideal parking space. This arrangement is not only a wonderful convenience to the hospital, but also serves as a means of relieving traffic congestion in front of the hospital property. At the present time a similar arrangement is being effected in front of the Ambulance House and the Internes' Home.

The entire cost of this was borne by the city and was made possible through the cooperation of Honorable John Klorer, Commissioner of Public Property. The hospital is appreciative of this great cooperation on the part of the city.

A study of the statistical report herewith appended, reveals the fact that the activities of the past year have again broken all records. This is true as to the total number of patients admitted into the hospital, hospital days, accident cases, out-door consultations, surgical operations and the number of children born. The net death rate of 5.69%, while a little higher than last year, is lower than the previous three years and compares favorably with similar institutions throughout the country. The per capita cost of \$1.74 shows an increase of four cents over the previous year, while the per capita of the clinic dropped to \$.25, a slight decrease under the previous year. This per capita continues to remain considerably under every other institution where statistics have been available. Until this amount ranges from \$2.00 to \$2.50, we may feel that our patients cannot possibly receive all the attention they should.

The pernicious practice of assigning two adults to a bed, of necessity, still exists, though to a lesser degree, and will continue to exist until the hospital is permitted to deny admission in excess of beds, unless the exigency of the case would demand admission, or unless the bed capacity of the hospital is considerably increased.

You are familiar with the budget for the next bi-ennium, which has been presented to the Louisiana Tax Commission. An increase has been

asked for, and it is earnestly hoped the entire amount will be given. This budget was carefully prepared and represents the actual needs of the hospital.

In the way of permanent improvements, the most urgent need is an additional nurses' home. There will be a nucleus of about \$50,000.00 for this purpose, left from the appropriation of two years ago.

The fifth floor of the new unit should be completed, and the home formerly occupied by the Sisters should be converted into wards for colored patients, as that is where the greatest over-crowding is at present.

New boilers will have to be installed the coming year, or else the hospital will face a potential danger of having a severe breakdown. Should this occur during the winter months, much suffering would be experienced by the patients.

The ambulances have again rendered very good service, but the age of these machines is such that unless new ones are purchased at once, the hospital will soon be forced to discontinue this service. It is only due to the unusual efficiency of the auto mechanic that they have been kept going at all. In addition, it might be said that the maintenance upkeep is excessive.

Many other improvements are necessary, but for the details, you are referred to the budget report which covers the items very thoroughly.

As to the other costs in general, we must face the inevitable and know that the cost of treatment for the sick and injured will increase for many years to come. More scientific data is compiled on every patient, than was the custom in former years, and the cost of surgical supplies, drugs, etc., has increased materially.

A joint meeting of the Medical Committee of the Board of Administrators and the Hospital Abuse Committee of the Orleans Parish Medical Society was held. This was a most congenial meeting, and the Hospital Abuse Committee expressed its appreciation to the Board for their contribution in minimizing hospital abuse. It was the desire of the Abuse Committee that the hospital questionnaire used for the admission of patients be placed also in the out-door clinic. This request has been complied with and will probably be of assistance in segregating those who are able to pay from those who cannot.

Statistics have been gathered from ten or twelve of the largest cities as to the method of handling their accident cases. This data has been referred to a special committee for study, and a report from this committee is looked for at a later date.

It is pleasing to report that the heartiest cooperation has again been given by all departments, without which success would have been impossible.

At a meeting of the Visiting Staff, held last October, a new Advisory Committee was elected. Dr. Jerome E. Landry was made President, Dr. Lucien Landry, Vice-President, and Dr. Lucien DeDoux, Secretary-Treasurer. The other four members of the Board being Dr. B. A. Ledbetter, Dr. H. W. Kostmayer, Dr. C. S. Jamison and Dr. A. E. Fossier.

This committee has met regularly each month, and the timely advice given has been very valuable to the Superintendent in solving the more difficult medical and other problems of the hospital.

The Visiting Staff has again functioned splendidly and they have been untiring in their efforts to administer to the professional needs of the patients. The hospital is greatly indebted to them and takes this means of expressing its deep gratitude.

The personnel of the House Staff consists of Dr. M. O. Miller, Senior House Surgeon, Dr. Wm. H. Cook, Junior House Surgeon, Dr. John G. Snelling, First Assistant House Surgeon, and Dr. Ambrose Storck, Second Assistant House Surgeon, Dr. Philip H. Jones, Jr., Senior Medical Officer, and Dr. Melville W. Hunter, Junior Medical Officer. These men have been faithful in the performance of their duty, and the Superintendent is appreciative of the aid they have given him.

It is felt that at no time in the history of the hospital has there been a better interne corps. This office has received from time to time very complimentary remarks from the Visiting Staff concerning them, and many letters of commendation are on file. With their new home completed, it is the belief that even more efficient service will be rendered.

The Sisters have, as ever, rendered noble service to the patients and have handled all other departments coming under their supervision, with the greatest efficiency. Money could not pay for their services and the hospital is deeply grateful for what they do.

The nurses have again performed their duties in an efficient and satisfactory manner. This is all the more to their credit, when it is realized there are not nearly enough nurses for a hospital of this size, and they are often times called upon to do more than might be the case with a sufficient number assigned. It is hoped the addition to the nurses' home will be built during the year, so there might be a sufficient number of nurses enrolled. On May 4th, 1927, there were thirty-six nurses graduated.

The Pathological Department and X-Ray Department have done an enormous amount of work and have been of inestimable aid to the staff in arriving at the proper diagnosis of the more difficult cases.

The Out-door Clinic has broken all previous records as to the number of patients treated. It would appear that unless this increase is soon curtailed, there will not be floor space enough for the handling of patients. The efficiency of the clinic has been a means of reducing the number of admissions into the hospital.

The Physical-Therapy Department, so ably conducted by Miss Marian Bently, has contributed largely to the improvement of the patients referred there.

The Heart Station, with its electro-cardiograph, has been functioning to the satisfaction of all. Due credit must be given Dr. George Herrmann, for his ceaseless activities in making this station available to all patients who require special heart study.

The Drug Store, in charge of Mr. Roger Blanchard, has been efficiently conducted, and has satisfactorily served the needs of all patients.

The Social Service Department has again done everything possible, but until the personnel has increased sufficiently for a hospital of this magnitude, it cannot be expected that this department will function as it should.

The Record Room, under the able management of Dr. G. Farrar Patton, has kept the records systematically and in order. Records may be found promptly and many of the staff have availed themselves of the opportunity to review these records. The fact that there have been 5,917 requests for the perusal of records will bear testimony as to the necessity of this department.

The Engineering Department, under the direction of Mr. John V. Ponder, which includes the engineers, electricians, carpenters, painters, mechanics, etc., has given wonderful service in maintaining the physical needs of the hospital. By referring to the report of the Chief Engineer, you will get an idea of the enormous amount of work accomplished by this department.

The Purchasing Department, under the direction of Mr. Henry Weilmann, has functioned in a conscientious manner. It is felt that purchases have been made in an economical, just and efficient way and the judgment of the Purchasing Agent has been reflected in a saving to the hospital.

Charity Hospital is again indebted to the Benevolent Protective Order of Elks. At Christmas time, a beautiful tree was placed in the Milliken and many presents were given to all of the afflicted children. In addition to this, arrangements were made for a pleasing entertainment by some of the juvenile talent of the city. The Committee on Arrangements spent several days in preparation for this jollification, which was so thoroughly enjoyed by all.

The Charity Hospital Needlework Guild broke all previous records as to the amount of work done for the hospital. The President, Mrs. Harry L. Howard, is an indefatigable worker and her enthusiasm and eagerness to accomplish results seem never to diminish. All of the ladies comprising the Guild have been of unusual service to the hospital during the past year, and the deepest gratitude and appreciation is felt for them.

Before closing, it becomes a privilege to express thanks to the press for their generous news articles and editorials concerning the hospital.

In conclusion, it is always a pleasure to acknowledge my gratitude to the Board of Administrators. This Board, composed of prominent men of the city, give unstintingly of their time in the administration of the affairs of the hospital. Individually and collectively, they have always found time to advise and guide me in the many problems constantly coming before me.

Respectfully submitted,

WM. W. LEAKE, M. D.,

Superintendent.

## SUPERINTENDENT'S REPORT

To the Board of Administrators, Charity Hospital,  
New Orleans, Louisiana.

Gentlemen:

Superintendent.

## REPORT OF THE CHIEF ENGINEER

New Orleans, La., January 10th, 1928.

Dr. Wm. W. Leake, Superintendent, Charity Hospital, New Orleans,  
Louisiana.

Dear Doctor:

I have the honor to submit for your consideration the following report of the work done in my department during the year ending December 31st, 1927.

The Electrocardiograph Department, located temporarily in Ward No. 110, has been moved to its permanent location formerly occupied by the Physical Therapy Department. This room was thoroughly overhauled, a redistribution of space being required. Stud and plaster partitions were erected extending the full width of room and dividing it into two sections, one for the Electrocardiograph machine and the other for examinations and consultations. A stud and plaster partition was erected from floor to ceiling forming a dark room for the developing of curves taken on the cardiograph machine. This room was made light proof with a light proof entrance. A new special hard rubber developing tank was purchased and installed. The room is also equipped with built-in features for the storage of supplies and films and will be added to from time to time as the work of this department progresses. All of the necessary electric wiring has been installed together with plumbing and heating. In the near future, wires will be extended from this room to designated wards, so that a curve of the heart action of a patient can be taken without removing the patient from bed.

After moving the Electrocardiograph Department from Ward No. 110, preparations were made for a new Diet Kitchen at that point. The old wooden floor was removed and the joists releveled and reinforced, to be used as a form for the installation of a reinforced concrete slab and ceramic tile floor. The entire plastering, found to be in a very bad condition, was removed and the place replastered; a glazed tile wainscot was extended five feet above the floor, entirely surrounding the room. In order to facilitate the traffic to and from this new department, a door was cut in the wall on the northwest side of room with a ramp extending fifteen feet to yard, all of which has been paved. All drains, hot and cold water supplies, and steam-heating lines were roughed in as the work progressed. This department will now serve two purposes. One section will be used for the preparation of daily feedings for babies, which will be done in a thorough and scientific way by the absolute sterilization of all containers and the preparation of various foods as prescribed by the doctor in charge of the service. In this section a high-pressure sterilizer, 20x48 inches, for sterilizing all milk bottles, pans, pitchers, etc., was built in flush with the wall. This sterilizer is of the latest type and pattern used in modern hospitals today. In addition to the sterilizer, a large pantry sink with full apron and integral back was installed with hot and cold sterile water attached, together with two additional outlets furnishing distilled water. This gives a very unique combination as the attendant can draw raw cold water, hot sterile water, cold sterile water,

and distilled water, as may be desired, without going from one point to another. The milk room is also equipped with a special refrigerator for the cooling of milk after being prepared. The design of this refrigerator was carried out as per your orders with a complete refrigerating unit attached. The box contains 18 cu. ft. of storage capacity and can be brought down to any temperature desired. The entire interior is porcelain-lined, as well as the exterior, and it is strictly sanitary in every respect.

The Diet Kitchen section has a 1½" brass nickelplated rail dividing one corner of room for use of the Dietitian in compiling charts, orders for special diets and other clerical work. A large one-piece full apron integral back pantry sink, with hot and cold water, has been installed, also a modern diet kitchen stove.

A large refrigerator has also been installed in this section, with a capacity of 16 cu. ft., ample in size to take care of the work in this department for some time to come. All of the necessary tables and cabinets have been installed and all the work done strictly in accordance with your orders. This Diet Kitchen, centrally located, is a vast improvement over the present one, which is too far from the majority of the Hospital buildings.

Owing to the large increase in the work of the X-Ray Department and the poor condition of dark room, the place was thoroughly overhauled and placed in a first-class condition with all modern appliances. In order to do this a temporary dark room was erected at the ambulance entrance just outside of the Main Building.

A new developing tank to meet the requirements of the X-Ray Department was designed by the Hospital. As per your orders, plans were drawn up, approved by you, and the work carried out to completion. This arrangement is composed of a built-in, reinforced concrete tank with copper lining for the water bath used for cooling. Into this tank are inserted three hard rubber tanks with flanges, and anchored to the concrete tank with brass studs. These are for the developing solutions and rinsing of films. In the water bath are refrigerating coils with a small refrigerating unit operating automatically. This apparatus can be adjusted to any temperature desired, the best results being noticed at 60 to 65 degrees Fahrenheit.

A new drying cabinet of our own design was also installed. This aids the department to get out pictures in a perfectly dry state with little delay. Several view cabinets were made for this department which are at present on display in the main section of the X-Ray Department. All of the above work was done strictly in accordance with your orders.

Due to the great increase in the number of cases in the Out-Patient Department, it was found necessary to build new record cabinets. Two large cabinets were manufactured and installed which are of a sufficient size to accommodate histories and index cards for the next eighteen months or two years. If any addition to the record room of this department is required in the near future, a larger location will be necessary, as paper closely packed is heavy material and should not be added to the foundation load of the Clinic Building.

A new G. U. dressing room was made on the second floor of the Main Building. The old dressing room in Ward No. 113 was found unfit

for further use and took up room which could be utilized for bed space. This dressing room has been equipped with all plumbing and facilities for efficient work.

During the year the entire Milliken Building was thoroughly renovated and painted, and partitions removed on several floors for the forming of nurses' service stations. These stations were plastered, electric lights and plumbing rearranged, cabinets built in for use of medicines, dressings and linens, and new chart desks were made and placed therein.

Owing to the poor condition of the baby bath in the delivery department of Ward No. 363, the entire arrangement was overhauled and placed in first-class condition. A new Leonard self-adjusting water tempering valve was installed to insure safety from scalding while bathing the babies.

In the doctors' kitchen in this building partitions were set back to give more floor space, a window cut down and made into a door for passage to a vegetable room which was formed just outside the kitchen by using the present porch structure and framing around same to make a screened enclosure. A new vegetable sink for the cleaning and washing of vegetables, and the necessary tables and racks were also installed. This is a great improvement over the old method of cleaning vegetables which was formerly done by using a bench on the lawn just outside of the Milliken kitchen with metal tubs for receiving and washing the vegetables, which crude method exposed the food to contamination by flies, etc., and caused an accumulation of garbage just outside the kitchen.

The serving rooms on each floor were entirely remodeled by the removing of partitions, giving a larger area of floor space. The plumbing was rearranged, new small gas stoves and refrigerators installed, together with metal tables manufactured in our shops.

Owing to the heavy demand made on the Main Kitchen and Doctors' Kitchen, three new steam jacketed kettles, 40 gallons capacity each, were installed, two in the Main Kitchen and one in the Milliken Kitchen. The present range in the Main Kitchen will have to be replaced during the coming year as the demand on it has been very heavy and repairs are mounting steadily. A gas range of suitable size would be ample for this service as a great deal of the cooking could be done in the steam cookers. This would cut down the cost of maintenance, eliminate the purchase of coke for fuel and increase the efficiency of this department to a great extent.

During 1927, the first, second, fourth and fifth floors of the Delgado Building were painted and thoroughly renovated. All dressing rooms and kitchenettes were remodeled and three nurses' stations with chart desks and built-in medicine cabinets were installed on every floor. During the coming year the hot and cold water lines in this building will have to be replaced as they are badly corroded and frequently give away. The cooling system for cold sterile water used in the dressing rooms and operating rooms will also have to be replaced.

Upon completion of the John Dibert Tuberculosis Hospital, contract was awarded for the erection of iron fence along Tulane Avenue, to match the old fence in front of the Hospital. As we had about 250 feet of fence formerly extending along Magnolia Street from Tulane Avenue

to the Nurses' Home, this was worked up to conform to the proper height. The granite base was extended and this fence installed and given two coats of paint to match the old fence.

As per your orders, two pavilions with pergola effect were erected on the roof of the Dibert Building for male and female patients. These pavilions are ample in size to accommodate the ambulatory patients that the building may have, and will enable them to lounge on the roof even during inclement weather as well as provide shade and a cool spot during the hot summer months.

Since the opening of the John Dibert Building several severe rains occurred which threatened flooding of the basement. In order to be sure that no flood would occur should the electric power lines give out, two large steam syphons have been installed and water can be ejected with our own power should occasion arise. This same protection has been installed in the basement of the Female Medical Building and will also be installed in the Sisters' New Building.

After completion of the Sisters' Building and the work of grading yard and grounds surrounding same was started, the old open gutter along Magnolia Street was filled. The water conductor pipes from the roof of the Nurses' Home formerly drained into this open gutter so an outlet for these was necessary. An eight-inch terra cotta drain line was laid the full length parallel with building and connected to the N.O.S.&W.B. drainage system at Gravier Street, and all water conductors from roof connected with same. The line was also extended to take care of the surface drains at the northeast end of building.

It was also necessary to extend the pipe lines for service to the Sisters' new building. Therefore, a concrete trench was installed from the main underground trench connecting the Dibert Building to the Sisters' Building. In this were put the high-pressure steam line, the vacuum return line, hot water line, hot water circulating line, and telephone conduit, all of ample size to take care of the requirements of this building. In addition to this trench, a four-inch cast iron cold water main was extended from the six-inch main in courtyard to this building for general cold water supply. A standard N.O.S.&W.B. fire hydrant was installed for use in case of fire in this section of the Hospital.

After the installation of main trench to the Dibert Building it was found necessary to rearrange the pavement surrounding the Milliken Building. New drains with catch basins were installed and extended to street connections, and the pavement regraded in such a manner as to give the best results. Formerly this section was subject to flooding, it being almost impossible to pass during or after a shower.

Owing to the expansion of the Hospital into the grounds adjoining Claiborne Avenue, it was imperative to increase the size of the old vacuum line extending to the Milliken and Nurses' Home Buildings. A three-inch vacuum line was installed connecting with the three-inch line in new trench and reaching to the four-inch vacuum return line under the Colored Male Building taking off the Morgue Building, Unit No. 1 and Colored Female Building en route. This new line is large enough to take care of any additional buildings erected in the grounds above mentioned.

The roofs of the Nurses' Home and the Power House were found to be in a very bad condition. They were scraped clean of all shells, etc., and covered with a heavy coating of high-grade roofing material.

During the coming year the decking on the cornice of several of the buildings will have to be replaced, especially the southeast side of the Nurses' Home. The sulphur and other chemical fumes from the New Orleans Public Service Co. just across the street seem to cause rapid corrosion of this metal.

To furnish the Internes' new quarters with light and power, telephone and signal service, a new underground system was installed across Tulane Avenue by the general contractor. In order that our proposed underground service for the Hospital be kept intact, so that it will be distributed from central transformer vault, two three-inch fibre ducts were extended from the present underground system at the Milliken Building and connected with the ducts crossing Tulane Avenue. With the addition of another three-inch duct from central manhole in the grounds in rear of the Milliken Building to manhole now feeding this building, service can be furnished to the Internes' Quarters from our transformer vault and all buildings can be taken off same en route.

The work of removing the old underground telephone cables which were continually giving trouble and changing to the new system of underground ducts with manholes at designated points has practically been completed, with the exception of the small section extending from telephone office to Main Building. Since the installation of this new system, our telephone trouble has been reduced to a minimum.

Owing to the Internes' new building being erected on the site of the old Carpenter Shop a new Carpenter and Paint Shop was built in rear of Power House on a site facing LaSalle Street. The building is a one-story brick structure for Carpenter Shop with a two-story rear section, which contains the Paint Shop on first floor, locksmith and shade room on second floor, with lumber shed at the side to the rear. The new building is spacious with ample room for the handling of long boards, etc. It is also equipped with a combination rip saw and edger, a mortising machine and band saw, all power driven. The designing of this building as well as all work thereon was done by Hospital labor.

All of the apparatus in the Power House is in good condition and working satisfactorily. During the year the boiler plant will require extensive changes. The Hospital has added several large buildings during the past three years which makes an additional demand on the boiler plant, especially during the winter months. For example, on January 2nd, 1928, the atmospheric temperature went to 23 degrees Fahrenheit; the three 150-H.P. boilers evaporated 581,925 lbs. of water during the twenty-four hours. Using the equivalent 30 pounds of water evaporated per H.P. this would show that the three boilers developed 808.2 H.P. per hour. During this period the three boilers consumed 158.5 bbls. of fuel oil or 6.6 bbls. of oil per hour. A complete survey of the necessary requirements of the boiler plant will be made and submitted to you for your consideration.

During the past year we received 16,689.65 bbls. of fuel oil and consumed 16,329.65 bbls. This includes fuel oil used for heating bake oven in bakery. On the 31st of December, 1927, we had on hand in the main storage tank and auxiliary tank at power house, 875 bbls. Comparing the years 1926 and 1927, there is only a slight difference of 365.34 bbls. of fuel oil used notwithstanding the fact that we had the new Diberni

Building and use steam for thirty-five or forty days during 1927 for drying out the Sisters' new building and Internes' Quarters. This was accomplished by strict economy in the boiler plant and the keeping of all apparatus up to a high state of efficiency.

During the year we consumed 884,575 K.W.H. for both light and power. This cost \$15,029.74, which is an increase of 118,845 K.W.H. over 1926, owing to the addition of new buildings.

Owing to the many new buildings erected at the Hospital during the past three or four years and the increased consumption of hot water, it was necessary to devise some means of delivering the amount of water required without incurring the expense of changing a great many of our hot water mains. As per your orders a motor-driven rotary pump was installed in the discharge line of hot water system to be operated during the peak hours. This pump is of ample capacity to take care of the hot water demand as well as to increase the pressure required to furnish hot water to the top floors of our highest building. Formerly we had to depend on the city water pressure, and when this pressure would drop to forty or forty-five pounds no water would be delivered at these high points.

The cost of refrigeration and lighting in the Morgue during the year was 17,212 K.W.H. at \$289.28 with \$4.50 for lubricating oil.

The cost for power in the Bakery was 1200 K.W.H. at \$20.50. The apparent low cost of current consumption is due to the fact that the apparatus is operated only thirty to forty minutes per day for mixing the dough.

During the past year 10,363 cans, or a total of 2,027.6 tons of ice were manufactured, at a cost of \$1.65 per ton. Owing to the constantly increasing consumption of ice, due to the addition of new buildings, the capacity of our plant will have to be increased by the enlargement of our freezing tank, or ice will have to be purchased during the extreme hot weather. During the year 1926, 1,868.20 tons of ice were used and in the past year 2,072.10. This is an increase of 203.80 tons. In 1928, the Sisters' Building and Internes' Quarters, and probably the Sisters' old building when used for patients will be added. You can readily see that an increased demand for ice will be made on our plant during the coming year.

The carpenters have been constantly employed in various changes and renovations throughout the Hospital, making new furniture, tables, cabinets, ice boxes, chart tables and desks, and general maintenance. A great deal of proposed work was curtailed as per your orders in order to reduce the working force with a view to economize throughout the entire Hospital.

All of the elevators, thirteen in number, are in good order and working satisfactorily. The hoist and counterweight cables were changed on the Colored Female, Main Building, and Milliken Building elevators.

In addition to the work on roofs and gutters, the tin and coppersmith has made seven perforated instrument containers for operating rooms, twelve steam instrument sterilizers, eight utensil sterilizers, thirty-two special thermometer holders, thirty-six thermos splints, covered twenty-seven tables with monel metal, made twenty-two dinner pans and repaired all tin and copper ware sent to the shop.

The painters have repainted the entire Milliken, Delgado and Colored Female Buildings, New Paint and Carpenter Shop, first floor of Sisters' Building, Secretary's and Telephone Offices, and various other parts of the institution. This includes beds, furniture, cabinets and all interior appurtenances.

The auto mechanic has kept all motor cars and trucks in first-class condition, several of the cars being taken out of commission and thoroughly overhauled and repainted. The painting and upholstering of all cars is done by this department.

The Engineers' Department responded to 8,432 calls during the year for repairs on steam, water, gas and electrical apparatus. This does not include calls for repairs made during the night watch.

All of the ambulances have been kept in commission twenty-four hours per day, with the exception of time they were out of commission for repairs, but at no time has more than one ambulance been out for repairs. The present ambulances are very old and will require replacement in the very near future, as it takes continual work on them to keep them in running order. The bodies on these machines have outgrown their usefulness and are showing signs of rapid deterioration. It would not be worth the expenditure to make extensive repairs on them. The three ambulance made 4,189 trips, a total of 18,796 miles, consuming 3,245 gallons of gasoline for fuel. This is an average of 5.49 miles per gallon. The total amount of gasoline purchased during the year was 10,218 gallons and consumed 10,220 gallons. Deducting the gasoline consumed by the three ambulances, would leave 6,973 gallons used by the eight remaining cars, and gasoline used by painters, gardener, plumbers, drugstore, and for general household use. The amount of lubricating oil purchased during the year was 355 gallons. Of this the ambulances used 107 gallons and the eight other cars 248 gallons. These eight cars consist of: One Dodge truck, three Ford trucks, Inspector's Ford coupe, two Social Service Ford sedans, and one Ford touring car.

During the early part of the year the work of filling and grading the Hospital cemetery was completed. These grounds have been raised about eighteen inches and will now drain properly. Heretofore, after a heavy rain it was almost impossible to bury the unclaimed bodies for several days. A roadway has been extended through the cemetery with a turning mound just midway. During the coming year a new fence will have to be erected at the Banks Street entrance. This has been held up as per your orders pending the paving of Banks Street which the city has been contemplating for some time as well as opening it through to City Park Avenue.

Respectfully submitted,

J. V. PONDER,

Chief Engineer.

## REPORT OF THE TREASURER

New Orleans, La., December 31st, 1927.

To the Board of Administrators,  
Charity Hospital, New Orleans, La.  
Gentlemen:

I respectfully submit below summary of receipts and disbursements, and on the pages following, comparative statements:

March 8, 1928.

To the President and Members, Board of Administrators, Charity Hospital,  
New Orleans, Louisiana.

Gentlemen:

The regular and semi-annual examinations made of the books, accounts and vouchers of the Charity Hospital, as kept by the Secretary-Treasurer, Mr. Fred W. Matthews, proved that, during the calendar year 1927, the combined cash receipts and disbursements of the General and all Special Funds were as follows:

Cash Balance January 1, 1927	\$ 28,568.91
Receipts during 1927	1,130,998.33
Total Balance and Receipts	\$1,159,567.24
Disbursements during 1927	1,155,447.26
Cash Balance December 31, 1927	\$ 4,119.98

Of this balance, the sum of \$950.00 was held as a petty cash fund, and the remaining \$3,169.98 was on deposit in the American Bank and Trust Company of New Orleans.

Yours very truly,

W. N. McFARLAND,

Supervisor of Public Accounts.

## PATHOLOGICAL DEPARTMENT

January 3, 1928

Dr. W. W. Leake, Supt.,  
Charity Hospital,  
New Orleans, La.

Dear Doctor:

I have the honor to submit a comparative statement of work done in the Pathological Department during the Years of 1926 and 1927.

	1926	1927
<b>DIVISION OF CLINICAL MICROSCOPY:</b>		
Urinalysis (Complete).....	12,663	14,906
Urinalysis (Chemical).....	25,957	25,322
Feces.....	412	277
Sputums.....	265	174
Malaria.....	56	78
Blood counts and differentials.....	966	737
Scrapings.....	278	369
Bacteriological Smears.....	4,140	4,611
Cell counts (Spinal fluids).....	971	1,284
Gastric contents.....	48	31
Smears and cultures from autopsies.....	30	29
Color index.....	245	704
	46,031	48,522
<b>DIVISION OF BACTERIOLOGY:</b>		
Blood Cultures.....	448	490
Urine Cultures.....	17	11
Feces Cultures.....	9	8
Sputum Cultures.....	2	4
Cultures from Naso-Pharynx:		
For B. Diphtheriae.....	1,880	6,342
For Meningococci.....	1	0
Spinal Fluids:		
Cultures.....	84	78
Smears for micro-organisms.....	159	146
Pus, Exudates, Transudates Cultured:		
Aerobic Cultivation.....	613	628
Anaerobic Cultivation.....	58	26
Milk:		
Total Bacterial counts.....	41	112
Cultures for B. Coli (For two months).....	0	20
Sediment test.....	0	20
Eye Cultures.....	165	374
	3,477	8,259
<b>DIVISION OF SURGICAL PATHOLOGY:</b>		
Operations Specimens Microscopic Examination.....	3,486	3,420
Autopsies Performed.....	494	408
Museum Specimens prepared.....	60	72
Animal Brains examined.....	250	335
Rush Diagnosis.....	23	31
	4,313	4,266

## DIVISION OF SEROLOGY:

	1926	1927
Agglutination Test:		
For Typhoid.....	315	336
For other conditions.....	369	79
Blood Grouped for Transfusion.....	330	881
Wassermann Reactions (Blood).....	32,398	32,728
Wassermann Reactions (Spinal Fluids).....	1,243	1,337
Blood for Coagulation Time.....	1,551	1,753
Blood for Bleeding Time.....	9	5
Globulins (Spinal Fluids).....	937	1,230
Colloidal Gold Reactions.....	226	386
Tuberculin Tests (von Pirquet).....	7	3
Typing for Pneumococcus.....	5	61
Spinal Fluid Typed for Pneumococci.....	1	0
	37,391	38,799

## DIVISION OF PASTEUR ANTI-RABIC TREATMENT:

Patients Applied.....	1,304	1,440
Patients Treated.....	474	759
No. Patients treated injured by proven rabid animals.....	213	355
No. Treatments administered.....	5,487	8,237
Deserted Patients.....	34	57
	5,487	8,237

## DIVISION OF CHEMISTRY:

Blood for Cholesterol.....	5	7
Blood Sugar Examinations.....	1,685	2,250
Non-Protein Nitrogen.....	1,416	1,982
Urea.....	1,335	1,671
Creatinine.....	1,388	1,787
Uric Acid.....	1,223	1,672
CO 2 Tension.....	132	361
Calcium Content.....	32	28
Blood Chlorides.....	25	98
Milk for Butter Fats.....	302	304
Fragility of Blood.....	16	6
Spinal Fluid Sugars.....	38	12
Urinary Chlorides.....	1	0
Phosphates.....	0	3
Total Blood Fat.....	1	0
Urea (Abdominal Fluid).....	1	0
Total Nitrogen of Urine.....	0	1
Uric Acid in Urine.....	0	1
	7,600	10,183

## DIVISION OF BASAL METABOLISM:

Basal Metabolic Rates.....	370	533
----------------------------	-----	-----

	1926	1927
SPECIAL EXAMINATIONS:		
Fragility Test.....	0	4
P. S. P. Tests.....	67	88
van den Bergh Reactions.....	59	93
Liver Function Tests (Phenol tetrachlorphthalein) (Rosenthal).....	4	0
Maturin Tests.....	0	7
Platelets.....	2	0
Icterus Index.....	36	107
Guinea pig inoculation.....	6	10
Bence Jones Reaction.....	2	1
Weil Felix Reaction.....	1	0
Brom-Sulpalein Test.....	0	1
	177	311

## DIVISION OF ANTITOXIN AND VACCINE PRODUCTION:

Vaccine Prepared (Autogenous).....	8	17
Peptone Solution Prepared for Clinic.....	300cc	1000cc
Typhoid Vaccine Distributed.....	70cc	85cc
	(triple)	
	9cc	
	12 doses	

Total No. Examinations All Type for Year..... 104,846 119,114

Respectfully submitted,

M. COURET, M. D.,

Director of Laboratories.

## REPORT OF DENTAL CLINIC

1927

Extractions.....	10,555

## REPORT OF THE DEPARTMENT OF HAY FEVER AND ASTHMA, CHARITY HOSPITAL.

As the beneficial effect of vaccine in hay fever and asthma is not generally understood, we have tabulated a list of cases showing the relative effects of pollen extract, of vaccine, and of the combined treatment in cases of hay fever and asthma.

Vaccine (bacterins) are sterilized suspensions of bacteria in normal saline solutions. They have been extensively employed to establish immunity against infections. The best example of this is in the immunization of armies and inmates of institutions against typhoid fever.

Immunity to infection depends on the development of a specific proteolytic ferment. When the specific ferment splits up the bacterium before it has time to multiply, the individual is immune. When the cleavage action is less prompt, but sufficiently so to split up the bacterium before it elaborates a fatal amount of the poison, the patient sickens but recovers. When the action of the ferment is still less prompt, and the bacterium constructs enough poison to kill, then its liberation causes death.

In the injection of vaccine, the sterilized bacteria in normal saline solution stimulates the formation of the specific proteolytic ferment, but the bacterium cannot multiply as they have been rendered sterile. The vaccine therefore increases the resistance of the patient, which is responsible for the beneficial effects of the vaccine.

The following list of cases of hay fever and asthma treated with vaccine, with vaccine and extract, and with extract only respectively indicate the favorable influence of the vaccine in these cases.

TOTAL.....			549 Cases

Extract only is used in pre-seasonal cases of hay fever and of hay fever and asthma, as the injection of vaccine is not indicated, this being used only in acute attacks during the course of the disease.

As a proof of the benefit of vaccine in hay fever cases, a series of 200 cases shows that the continued use of full doses of extract during the acute attacks tends to prolong these attacks. A small dose shortens the attack by one-third, but, with the scientific use of the vaccine, the average duration of the attack is reduced to one-half.

Respectfully submitted,

WM. SCHEPPEGRELL, M. D.,

Hospital, New Orleans.

## REPORT OF THE DIRECTRESS OF NURSES

To the Honorable Board of Administrators, Charity Hospital, of New Orleans, La.

Gentlemen:

It is my privilege to present the thirty-third annual report of the School of Nursing for the year 1927.

The census of the school is as follows:

Directors of School .....	2
Assistant of Director .....	1
Instructor .....	1
Part-time Instructors .....	4
Secretary .....	1
Supervisors—Sisters .....	15
Graduate Nurses .....	30
Night Supervisors .....	3
Matrons of Nurses' Home .....	3
Graduating Class .....	36
Senior Class .....	30
Junior Class .....	42
Freshman Class .....	82
Affiliated Students .....	11
Post-Graduates .....	7

172

The year has been an unusually busy one for the nursing department. The pressure brought to bear upon it as the hospital progresses and expands is keenly felt. Many more nurses are still needed to conform to the growth of the Hospital.

The theoretical instruction has been successfully carried on under the Block System. As instructor we have welcomed Miss M. Dansereau, one of our graduates.

Our reports of the past few years call attention to the overcrowded conditions of the nurses' home. At the risk of repetition it should again be stated that if the nursing school is to be maintained at a high level of efficiency, it must be generously supported by the Hospital which it serves. Evidence is not lacking that this fact has long been recognized by the Board of Administrators, as indicated by the consideration it has given this department at the regular meetings. Lack of funds is seemingly the only handicap responsible for the present congestion of the nurses' quarters.

There can be no doubt that a healthy body and mind takes precedence. To maintain this essential, it becomes necessary to give our young women suitable surroundings and hours of duty that are in accordance with their physical capacity.

The increase in the number of entrants has compelled us to remove the night nurses from the fourth floor of the new unit into their regular rooms at the nurses' home. This step has deprived them of separate sleeping quarters, so necessary for proper rest. The apartments in the new unit have been assigned to preliminary students. This larger number of students has enabled us to relieve the night nurses for one night each week.

These young women who are entering our schools cannot be left to work out their own destiny. They require constant supervision which is only made possible by the employment of graduate nurses.

The present records indicate the largest number of students in the history of the school. We report one hundred and sixty-five student nurses; last year our number was one hundred and thirty.

Affiliation has been established with:

St. Mary's Hospital, Patterson, La. ....	6 months
Inge-Bondurent, Mobile, Ala. ....	6 months
Dunson Hospital, LaGrange, Ga. ....	3 months
Florida State Hospital, Chattahoochee, Fla. ....	3 months

Seventeen nurses have completed post-graduate courses during the year.

The Kostmayer scholarship was won by Miss Doris Vernon. The honor pin was merited by Miss Vesta Alford. The Bacteriology scholarship was awarded to Miss Frances Louise Beckham, and the course in Anesthesia was given to Miss Emily Talbot.

Respectfully submitted,

SISTER STANISLAUS,

Directress of Nurses.

## REPORT OF OUT PATIENT DEPARTMENT

February 8th, 1928.

Dr. W. W. Leake, Superintendent, Charity Hospital of Louisiana.

Sir:

We have the honor to submit the annual report of the Charity Hospital Out-Patient Department for the year 1927. During the year 63,346 new patients were admitted, the total number of visits to the various departments was 206,845, with a daily average of 750, as shown in the schedule which immediately follows:

SERVICE	NEW CASES	CONSUL- TATIONS	TOTAL NO. VISITS 1927	TOTAL NO. VISITS 1926
Fracture.....	1,413	8,447	9,860	8,227
Surgery.....	18,883	49,605	68,488	59,127
Medicine.....	9,071	21,885	30,956	29,207
G. U. for Men and Salvarsan.....	5,630	24,930	30,560	24,942
G. U. for Women.....	989	3,246	4,235	4,340
Gynecology.....	4,289	6,220	10,509	9,571
Obstetrics.....	1,623	5,066	6,689	6,099
Pediatrics.....	2,978	5,501	8,479	9,467
Neurology.....	709	2,075	2,784	3,052
Dermatology.....	2,858	3,656	6,514	5,463
Ear, Nose and Throat.....	7,301	14,840	22,141	20,076
Orthopedic.....	582	1,871	2,453	2,190
Eye.....	3,075	10,931	14,006	14,792
Hay-fever.....	189	3,512	3,701	4,582
Dental.....	3,756	4,269	8,025	5,710
TOTALS.....	63,346	166,054	229,400	206,845

A comparison of these figures with the figures of 1926 shows a continued increase in attendance. There was a gain of more than 5,000 in admissions and a gain of more than 12,000 in the total number of visits.

The Neurology, the Eye and Hay-fever Clinics remained almost stationary in attendance. All the other Clinics increased in numbers, the greatest gains being made in the Dental and Surgical Clinics.

The Surgical Clinics made a gain of more than 1,400 in admissions, and a gain of almost 8,000 in revisits; 1,930 minor operations were performed in these Clinics.

The Obstetrics Clinic shows a slight increase in admissions and a very gratifying increase of more than 500 in the number of revisits. Desertions from this Clinic were most infrequent. The increasing number of mothers who returned to the Clinic after delivery for examination, and who brought their new-born babies to the Pediatrics Clinic for observation was gratifying proof of the excellent results being obtained.

The afternoon Clinics on Tuesdays, Wednesdays and Thursdays for refraction was a distinct improvement in the Eye Clinic. By this measure the overcrowding in the morning Clinic has been materially lessened. The facilities for treatment have been greatly increased by an enlarged staff and the purchase of new equipment and instruments. The Eye Clinics referred to the Hospital for operation 465 patients.

The Ear, Nose and Throat Clinic continues to lead all the other Clinics in admissions and revisits. This year 7,301 new patients were admitted, 14,840 revisits were made, and 1,536 patients were referred to the hospital for operation.

The Salvarsan Clinic, the G. U. Clinic for men, and the G. U. Clinic for women, had a combined admission of 6,619 patients; the total number of visits was 34,795. There was a proportionately large increase in the amount of work done as shown by the following statistics:

Number of microscopic examinations in Venereal Clinics.....	899
Number of patients referred to Hospital from Venereal Clinics.....	280
Number of doses of Arsphenamine given in Venereal Clinics.....	9,313
Number of treatments in Non-Venereal Clinics.....	3,312
Number of doses of Tartar Emetic given Intravenously.....	321
Total number of treatments in Venereal Clinics including Arsphenamine and Tartar Emetic .....	30,771

The work in the Clinic Laboratory increased. The total number of tests made in 1926 was 31,329, 13,855 of which were Wassermanns. In 1927 the total number of tests made was 35,071, 14,713 of which were Wassermanns.

The number of X-Rays made for the Clinic was 6,320, a slight increase over the previous year.

The number of visits to our Record Department for histories was 2,155. Last year there were fewer than 1,000 calls for records.

Number of patients admitted to Hospital .....	3,654
Number of patients discharged from Clinics .....	5,895
Number of patients who did not return in two months—Discharged ..	59,743
Total number of patients discharged from Clinics .....	65,638

We wish to express our appreciation to the Visiting Staff, to the Social Service Department and the Clinic employees to whom we are much indebted for their splendid co-operation and generous assistance.

Respectfully submitted,

SARA BABB, R. N.,

Superintendent of Clinics.

## SOCIAL SERVICE DEPARTMENT

---

January 25th, 1928.

Dr. Wm. W. Leake, Superintendent of Charity Hospital, New Orleans, Louisiana.

My dear Dr. Leake:

There has been little change in the personnel of the Social Service Department during 1927.

The work has been moving steadily along, the limited staff continuing its efforts with attributes of perseverance and endurance. The requests for service have been increasingly great from the rural, urban, and institutional contacts. The appended report shows little variation from the preceding year.

Much time and thought have again been given to the patients coming from the parishes. The care of these patients after discharge continues to be a problem and only through the respective parishes realizing their responsibility will a solution be obtained. However, when feasible, a contribution has been given to their convalescence and social adjustment.

As a shuttle, the Social Service Department has been weaving with the affiliating agencies an intricate design in salvaged lives.

In addition to social treatment, reports have been released, conferences have been held and attended, so that a greater co-operation and co-ordination of social and medical work might be achieved.

A few months ago, we had the good fortune to have a visit from the Educational Secretary of the American Association of Hospital Social Workers, who quickly discovered that Charity Hospital furnished much material for medical and social work, and left with us her good wishes for a greater and closer inter-relationship.

Two lectures were given again this year by the Department to the student nurses, on Medical Social Work and its relation to the Hospital.

The occupancy of the Dibert Building by the tubercular patients brings forcibly to us the increasing need of a more extensive application of case work methods. However, with the large number of patients handled by each worker, this can only be accomplished in a comparatively small per cent of the cases.

The cardiac patients offer a tempting challenge to the Department for a greater activity in their group.

The patients in the neurological wards and clinics are at times given the minimum of attention. In this, as in the previously mentioned groups, preventive work is an outstanding contribution.

A beckoning call comes from the pediatric, maternity, and other services.

When we consider that in other cities hospitals of smaller bed capacity have a larger number of social workers on their staff, we realize we are still experiencing "growing pains," the best medication for which is a larger budget.

In concluding permit me to acknowledge with thanks the co-operation of our Superintendent, of the Board of Administrators, of the doctors, sisters, nurses, the clinical secretary, the other attaches of the Hospital and all outside agencies who have helped us (to quote Dr. Richard Cabot's definition of the purpose in Social Work) "to unblock and keep open the channels of understanding between client and worker, between client and family, between agencies, between social groups and between different parts of the client's own personality, in order through these channels we may favor the entrance of the spirit and bounty of God."

Respectfully,

LAURA BACHMAN,

Director, Social Service.

REPORT OF CLERK

# REPORT OF RECORD ROOM FOR YEAR 1927

The following Tables show the number of Histories actually filed. Each History is filed under its Principal Diagnosis though death may have been due to a Complication, as shown by notes, viz.: a-Nephritis. b-Pneumonia. c-Toxaemia. d-Heart Disease. h-Hemorrhage. p-Peritonitis. s-Septicaemia. x-Shock.

November.....	186	8	11	19	12	17	29	4	7	11	12	7	19	78	41.93%
December.....	223	9	12	21	19	14	33	3	3	6	18	17	35	95	42.60%
GRAND TOTALS.....	2,391	120	161	281	133	182	315	32	53	85	147	123	270	951	39.77%

Apparent Gross Mortality, 2391 Deaths among 29,004 Cases, is a trifle more than 8 per cent.

Net Mortality, deducting 951 Deaths from Incurable Causes, as shown by Table, is but 4.89 per cent.

Twelve patients died on the operating table, viz.: One White Adult Male and 7 Colored Males.

One Colored Female Child, 3 Colored Females.

The number of Histories allowed to be taken from the Record room for teaching and other legitimate uses, was 5917, besides which a great many were consulted in the Record Room.

CONDENSED REPORT OF RECORD ROOM FOR THE YEAR 1927  
GENERAL RECAPITULATION

	TOTAL	CURED	IMPROVED	STATIONARY	DIED
Medical Histories Filed.....	8,435	667	4,116	2,183	1,469
Surgical Histories Filed.....	13,505	2,560	8,018	2,202	725
Gynecological Histories Filed.....	2,858	380	1,546	858	74
Obstetrical Histories Filed.....	4,206	3,013	417	653	123
GRAND TOTALS.....	29,004	6,620	14,097	5,896	2,391

Infants Detained with Mothers...9

Still Born.....115

## SUMMARY OF OBSTETRICAL CASES

## As per Histories filed in the Record Room

There were 1506 Histories of Maternity Cases recorded in the Year 1927

White.....	542	Primipara.....	703
Colored.....	964	Multipara.....	803

## PRESENTATIONS

## POSITIONS

Vertex.....	{ Left Occipito-Anterior.....	951

## MANNER OF DELIVERY

Naturally.....	1,387
By Forceps (Some in connection with Podalic Version).....	78
By Podalic Version (Some with the aid of Forceps).....	20
By Caesarian Section (2 Mothers died, 16 Infants delivered alive).....	21

There were 24 Cases of Twin Parturition.  
There was no Case of Triple Parturition.

## MORTALITY AMONG MOTHERS

There were 21 Deaths among Mothers, or only 1.32 per cent.

## CAUSES OF DEATH, NOTED AS FOLLOWS:

From Eclampsia.....	4
From Pneumonia.....	2
From Nephritis.....	4
From Organic Heart Disease.....	2
From Meningitis.....	1
From Tuberculosis.....	1
From Hemorrhage.....	1
From Shock (1 Placenta Previa, 1 Deformed Pelvis).....	2
From Septicaemia.....	3
From Carcinoma.....	1

The Number of Children born was recorded as..... 1,530

Males.....	829	Delivered Living.....	1415	
Females.....	701	Still-born.....	115	Total..... 1,530
